PhD Student Position

CALL FOR APPLICATIONS

Plant–Soil Interactions

Gas exchange and isotopic tracing

Join the FCCF Center and a national Israeli research consortium

Based at the Robert H. Smith Faculty of Agriculture, Food and Environment
The Hebrew University of Jerusalem | Rehovot, Israel

PROJECT FOCUS

This project centres on the interaction between plants and soil: how roots and the surrounding soil exchange gases and influence one another.

We are looking for a highly motivated and curious PhD student to investigate plant–soil interactions in agricultural and natural ecosystems, using gas-exchange measurements and isotopic tracing to follow what passes between roots and soil.

THE RESEARCH & TEAM

Work with a multidisciplinary team spanning soil and plant sciences, microbiology, and atmospheric science. Use advanced experimental technologies to investigate the processes linking plants and soil, and their exchange with the atmosphere.

WHO WE ARE LOOKING FOR

Technical aptitude and troubleshooting skills are especially important. We seek someone who enjoys hands-on experimental work, solving practical problems, and collaborating across disciplines.

Outstanding MSc applicants are also welcome if they aspire to an academic career and are interested in potentially continuing to a PhD.

APPLICATIONS & ENQUIRIES
